Development Workflow

Starting Development Server

```
# For Unix/Linux/Mac
npm start

# For Windows
npm run startWindows
```

The app will automatically reload when you make changes to source files.

Code Scaffolding

Generate new components, services, etc. using Angular CLI:

```
# Generate a new component
ng generate component components/new-component

# Generate a new service
ng generate service services/new-service

# Generate a new module
ng generate module modules/new-module

# Generate a new pipe
ng generate pipe pipes/new-pipe

# Generate a new directive
ng generate directive directives/new-directive
```

Linting

Check code quality and style:

```
npm run lint
```

Building for Production

```
npm run build
```

Build artifacts will be stored in the `dist/` directory.
