

# Development Workflow

## Starting Development Server

```
# For Unix/Linux/Mac  
npm start  
  
# For Windows  
npm run startWindows
```

The app will automatically reload when you make changes to source files.

## Code Scaffolding

Generate new components, services, etc. using Angular CLI:

```
# Generate a new component  
ng generate component components/new-component  
  
# Generate a new service  
ng generate service services/new-service  
  
# Generate a new module  
ng generate module modules/new-module  
  
# Generate a new pipe  
ng generate pipe pipes/new-pipe  
  
# Generate a new directive  
ng generate directive directives/new-directive
```

## Linting

Check code quality and style:

```
npm run lint
```

# Building for Production

```
npm run build
```

Build artifacts will be stored in the `dist/` directory.
